Contents

Contents	i
1 Lexer	1
2 Parser	2
3 Type checker	3
4 Compiler	4
Bibliography	5

1 Lexer

Stuff goes here. The lexer is pretty simple, so not much needed.
Torbens bog [[Mog10](#)].

2 Parser

Stuff goes here. Talk about shift/reduce conflicts, etc.

3 Type checker

Stuff goes here. Don't have any idea what though :P

I guess we should include some code examples with lstlistings.

4 Compiler

Stuff goes here. Guess we should include code pieces like in the type checker. Should probably talk about register allocation as well and our translation to MIPS.

Bibliography
