Contents

1 Lexer

Stuff goes here. The lexer is pretty simple, so not much needed. Torbens bog [**?**].

2 Parser

Stuff goes here. Talk about shift/reduce conflicts, etc.

3 Type checker

Stuff goes here. Don't have any idea what though :P
I guess we should include some code examples with lstlistings.

4 Compiler

Stuff goes here. Guess we should include code pieces like in the type checker.
Should probably talk about register allocation as well and our translation to
MIPS.
